Profile

I am an aspiring full-stack developer skilled in MERN stack development, database management, and API integration. I have applied my problem-solving abilities in real-world projects like **Ecosphere**, an AI-powered platform that connects people affected by natural disasters with nearby volunteers for real-time chat and on-ground assistance. I built this project with secure backend APIs, integrated AI-based chat functionality, and implemented payment gateway security to ensure safe and scalable operations. Through an internship, I aim to refine these skills, gain industry experience in scalable application development, and deliver meaningful contributions to impactful projects.

Education Enrollment

Kalvium's UG Program in CS (Software Product Engineering)

2024 – 2028

Campus: KARE Srivilliputhur

Bachelor's enrollment: B.Tech – Software Product, KARE

Technical Skills

- **Languages:** C++ (Advanced), Python (Intermediate), Java (Basic), JavaScript (Basic)
- **Frontend:** React.js, HTML, CSS, Tailwind CSS, Framer Motion
- **Backend:** Node.js, Express.js, Flask
- **Databases:** MongoDB, Mongoose, MySQL
- **Auth & APIs:** JWT, RESTful APIs
- **Cloud & Tools:** AWS (EC2, S3, Lambda, DynamoDB, RDS – Intermediate), Postman, Bruno, VS Code, Render, Netlify, Vercel
- **Version Control:** Git, GitHub
- **Operating Systems:** Windows, Linux

Achievements & Extracurriculars

Hackathons & Competitions - Led a 4-member team in an AI Hackathon; prototype selected for the final round out of 368 participants. - Campus-level finalist in the Pixel Perfect Hackathon for a user-centric UI/UX solution.

Technical Contributions - 320+ GitHub contributions in the past year. - Solved 80+ DSA problems on LeetCode.

Active Learner - Continuous MERN stack practice through projects and coding challenges.

Personal Interests - UI/UX design trends, building web-based tools, exploring LLMs, and writing beginner-friendly tech content.

Projects

E-commerce (25/02/2024 – Present)

Tech: MERN (Express.js, React.js, MongoDB, Mongoose, Axios), RESTful APIs

Impact: Optimized product, category, and inventory management via efficient CRUD operations.

Highlights: Deployed for testing and demos; scalability improvements planned.

Learnings: API integration, state management, and production-grade database architecture.

CraveCart

Tech: React, Tailwind CSS, React Router, Framer Motion; Node.js, Express, MongoDB, JWT; Axios, Geolocation API

Deployment: Netlify/Vercel (Frontend), Render/Heroku (Backend)

Impact: Enhanced data integrity and UX through optimized CRUD workflows.

Highlights: Successfully deployed; scalability enhancements planned.

Learnings: Full-stack API integration and state management.
